[-](#)

proportional development
of
the
region

Shown the essence of a complex-proportional and balanced development of the territory. Discovered the influence of proportional development activities on sustainable development in the region. Substantiated the nature and necessity of forecasting complex-proportional development.

Key words: complex-balanced development, component and territorial structure of the economy

Klimchuk B.P . Evaluation of natural and geographical factors of the Volyn region

The social and geographical assessment of complex-proportional development of Volyn region was done

Matching the level of natural resources of their potential was found. variation possibilities of the main kinds of resources Volyn region was determined.

Key words: complex-proportional development, Volyn region.

Golub G.S. Settlement conditions as a basis for vital activity of the population of Volyn region

This article is sanctified to the processes of vital functions of population of the Volyn area. A structure and dynamics of quantity of population of area are reflected, and also the regionally-typology analysis of vital functions of population is done.

Key words: population moving, vital functions of population.

[Kravec T.N. Social and geographical aspects of functional transformation of agricultural sector in the Lviv region](#)

Theoretical, methodological and practical problems of functional transformation processes agricultural sector at the regional level.

The tendencies and prospects of development of these processes in agriculture

Lviv for individual components transformation.

Grounded motifs development of agriculture

.

Key words: transformation, agricultural area, functional transformation area.

[Krasheninnikova A . A . Territorial structure of demogeographic system of Chernigiv region](#)

Regional demogeographic system hierarchy levels have been highlighted in territorial aspect. Chernigiv region fundamental system centers have been designated. Introduced Chernigiv region demogeographic system territorial structure scheme.

Key words: population, demogeographic system, DGS territorial structure.

Enikova V.F. Study of the impact of demographic problems on a number of labor resources of Slutski district of Minsk region

The purpose of the article is studying population of Slutsk region and researching of the influence of demography problems on the labor force. As a result of using generous geographical, statistical and mathematical methods of data processing, it was found out that, manpower is reduced on the territory of Slutsk region. And in the future it can cause problems with workforce support to the industrial and agricultural companies in the region.

Studying of manpower requirements for some categories of labor force will continue. This research have a great practical meaning because theme of studying own region is included in the geography program for 10 grade, but materials on it are not in the textbooks. This material can be use to extra-curricular activities too.

Tsvirko M.F. Development of marketing services at the largest enterprises of the processing industry of the city of Slutsk in Minsk region

Slutsk district is the land of rich history, unique culture and developed economy. The area is the largest agricultural producer in Minsk region. Wide range of agricultural products determines the specialization of the production of our city - food-processing industry. The city has the largest sugar factory-refinery in our country, meat packing plant, cheese-making factory and other food processors. Products of Slutsk enterprises enjoy popularity not only in domestic market but are also exported to Russia, Kazakhstan, Kyrgyzstan, Uzbekistan, Azerbaijan, Armenia, Moldova and Ukraine, as well as Lithuania and Germany, Poland, Czech Republic and Italy. New outlets are being developed. Negotiations with Venezuela, Lebanon, Iran and Syria are underway. Successful activity of marketing service helps to increase profitability and contributes

to the development of enterprises of food industry. Their goods are always in demand in the domestic and foreign markets, as they have a good taste, commensurate price and they are safe for health.

[Oliylyk Ya . B ., Getman V.I. Problems accumulation of human waste and its development](#)

At the present stage of evolution the biosphere of the Earth is in a critical condition. Pollution of the environment by human waste is widespread.

The idea that Biosphere

«

works

»

on non-waste principle is wrong.

The problem is how to make the biogeochemical cycles of chemical elements (in particular, biophylic), their small biological cycle more closed, that is, how to minimize the loss or

«

waste

»

of cycle.

If you take into account man-made (anthropogenic) cycle of chemicals and elements (this is very actually now) it's up to small technology waste (close to a waste-free).

[Zub Y.O. , Smirnov I.G. Socio-economic and financial problems of the euro area : the geographical dimension](#)

Recently the debt crisis in Europe began to represent the increasing threats for further development of the world economy. The situation has not stabilized for the last five years, and now it reveals new threats for economic and social development. The debts reached such picks that they could cause a new wave of economic crisis. The reasons of such instability in Europe have economic nature, but they are reflected on the currency of the EU - euro, thus the majority of the countries are deprived from possibilities to carry out their monetary policy. To some extent the main problems are connected with the overcoming of distinctions in economic development of the EU countries, formation of effective mechanisms of supranational cooperation, coordination and implementation of collective decisions, and that requires to take into consideration the geographical factor of social and economic development of the EU.

Keywords: Eurozone, debt crisis, public debt, monetary and credit policy, recession, credit rating, geographical features.

Mikhailenko T.I . Generalization of the European experience in the development of the strategy of socioeconomic development of cities (socio-geographical aspect)

The key principles and priorities on the strategy for development of Kiev up to 2025 are considered.

Key words: strategy for development, key principles, world cities.

Rudneva M.G. Bordeaux wine cluster – socio-geographic characteristics

The article describes the socio- geographical features of Bordeaux wine cluster, in particular its territorial structure

. Analyzed the influence of various factors on the formation and functioning of Bordeaux cluster , according to the scheme of "diamond" by Michael Porter.

Suprun Y.G., Smirnov, I.G. The countries of the European north in the development of projects of transport and logistics infrastructure

of the European Union

The article reveals the main provisions of European transport policy for the integration of the Nordic countries in the trans-European transport network system (TEN-T), considers major programs and projects of the European Union for the development of transport infrastructure of member countries of the organization and its neighboring states

Key words: European transport and logistics policy, trans-European transport network, funding, priority projects, intermodal traffic, multimodal routes.

III. NATURAL GEOGRAPHY: THEORY AND PRACTICE

[Ismailov R.A. Hydrological characteristics of mountain rivers Gabala-Ismayilli region](#)

This article about the changes in the hydrological characteristics of mountain rivers Gabala-Ismayilli region. In study used a different approach. In this article are also studied the long-term changes in annual river discharge.

[Grishko S.V. The value of «Stalin's Great Plan for the Transformation of Nature» for the steppes of the Eastern Europe](#)

Based on the processing of literary and archival sources was analyzed the meaning of «Stalin's plan to transform nature

»

to the steppes of the Eastern Europe. The purpose of the plan was preventing drought, sand and dust storms by building ponds, planting protective forests plantation and introduction of grass crop rotation in the Southern regions of the USSR (Povolzhia, Northern Caucasus, Ukraine).

Key words: «Stalin's plan for the transformation of nature», state forest belt, protective forests plantation, grass crop rotation, steppe.

[Nenko H . S ., Mihaylenko V . P ., Oliksievets I . L . Geological basis to the selection of location of SDW site](#)

This paper reviews the negative effects of the landfills' functioning throughout their life cycle. The needs to supplement the existing building code by the criteria, which take into account the conceptual framework of sustainable development and the provisions of international environmental agreements are discussed. The paper summarizes the experience of using such criteria and treatment of modern methods of negative effect assessment in the domestic practice of the EIA procedure.

Key words: sustainable development, landfill, construction regulations.

[Sydorenko M . V . General regularities of territorial structure and factors of territorial differentiation of environmental landscape mode of plain part Ukraine](#)

The common factors of territorial structure of the ecological modes are considered. The factors of territorial differentiation of the ecological modes are investigated.

Key words: ecological mode, territorial structure, factors, territorial differentiation, «anomalous» region.

[Yatsenko A . D . Methods of determination of recreational pressure in silvicultural landscapes in the northwest of Pryazovia](#)

The paper examines the main approaches and methods for determining the maximum

permissible and other recreational pressure.

Key words: recreational loads, recreational digression, functional area.

[Bondarets D.S. Calculation of recreational capacity of forest stands drawing on the example of Zaporizhia region](#)

Questions of expansion of the recreational potential of the territory are described. One of the opportunities to increase it is recreational use of forest plantations. Increased afforestation areas besides preserving the natural capacity to prevent degradation of landscapes allows increasing recreational vessels territories and expand opportunities for their use.

Key words: recreation capacity, recreational potential, forest plantations, agrarian landscapes.

[Magir O.Y. Natural and cultural framework of humanistic landscape field of Volyn region](#)

The idea of natural and cultural framework as a system of human values that somehow reflected in the landscape are suggested and substantiated. These values were formed and shaped by , but rather in conjunction with landscapes territory. The basic structural elements of natural

and cultural
frame
of Volyn region
is
core
, peripheral
zone
, linear
structure.

Voloncevich O.O. The role of anthropogenic transformation of geographical landscape in the functioning and the diversity of species of ornithocomplexes of a big city

In the article the short historical analysis of a level of geographical anthropogenic landscapes investigations is carried out. The composition of bird communities as well as species habitat distribution was studied during breeding period in typical landscapes within Kharkiv. The differentiation of city ornithocomplexes on degree of anthropogenous transformation of a geographical landscape on Kharkiv is presented. The total of 84 bird species was registered. In forest fragments dominated Chaffinch, Great Tit, Blue Tit and Wood Warbler. In built areas the dominants of bird communities were Tree Sparrow, House Sparrow, Swift and Rock Dove.

Key words: ornithocomplex, ornithofauna, landscape, anthropogenous transformation of a landscape, the natural landscape, the changed landscape, the urbanized landscape.
